BUILDING STRIP-PLANKED BOATS BY NICK SCHADE PDF

The first comprehensive book on stripbuilding almost any type of small boat

Strip-planking is a popular method of amateur boat construction, but until now there has never been a book that showed how to use it for more than one type of boat. Author Nick Schade presents complete plans for three boats of different types (canoe, kayak, and a dinghy) and shows you step-by-step how to build them. Written for all amateur builders, the book covers materials, tools, and safety issues.

A Good Book for Builders of Wood-Strip and Fiberglass Boats

By John D. Caldeira

Building Strip-Planked Boats by Nick Schade primarily describes methods for building beautiful boats from wood strips, fiberglass and epoxy. It updates many techniques that were described in the author's earlier book, *The Strip-Built Sea Kayak*. This book also provides offset dimensions and instructions to build a dinghy, a one-person canoe and a rough-water sea kayak.

This book provides an excellent overview of wood-core and fiberglass construction, and detailed information on working with wood strips, fiberglass and epoxy. Many practical tips are included, as well as suggestions for avoiding and dealing with the most common problems.

However, the book seems to be missing a few chapters. Significant information for the first-time builder is absent in this book: The kayak section contains no information on the construction of bulkheads, footbraces, rudders, retractable skegs, or outfitting the boat with deck rigging and a seat. Many best practices are missing, such as measuring epoxy with nested cups, preserving brushes and rollers by freezing, pre-taping

seams for joining hull and deck, and using webbing for deck riggings.

Other best building practices receive only scant mention, such as using masking tape and a sharp blade to trim secondary layers of fiberglass. The book would also have benefited from more photographs of the finished boats.

The book would have been more appealing if it offered designs for a more general-purpose canoe and a more general-purpose kayak, as fewer people will be interested in these niche designs.

This book is a good supplement for boat-builders, but most first-time builders of a strip boat would probably learn more from the step-by-step organization of Nick Schade's first book, *The Strip-Built Sea Kayak: Three Rugged, Beautiful Boats You Can Build*, or Ted Moores' books *Canoecraft: An Illustrated Guide to Fine Woodstrip Construction* and *Kayakcraft: Fine Woodstrip Kayak Construction*. This is a 3-star book.

Good intro to little boats

By Al Bacone

If you already have some solid basic woodworking skills and have been around canoes and kayaks enough to know basically what they look like, this book contains most of the information you would need to build one, including plans and offsets for what look like a couple of beauties. It also explains "lofting" in such a way that anyone who got a D- or better in High School algebra should be able to get it. That said, this is not the best book I've found on strip-building boats, but it wouldn't be a bad choice at all.

good but too scattered

By Just Me

There are many good points in this book but in my opinion it is trying to be too much for too wide an audience. In the process of covering multiple types of craft the "gems" are somewhat hidden. It was a good effort, but I wish in this case it had been more linear in the presentation. Don't get me wrong, I would buy it again.
