Great for architecture students

By John Gibbons

I am an architecture student who is getting close to graduation. I have started to work at a residential firm and as many others in my position could I'm sure attest, they don't prepare you for the real world very well when it comes to things like details. I have almost no builder experience and this book along with the others in the series by McLeod are really great for starting to figure out how these beautiful things we see every day on the various architecture websites actually go together. These books do a nice job of showing you the typical images that you would see in any architecture book and then presenting the details of how they were actually built using graphically pleasing and easy to read diagrams. The diagrams are well-labeled as well. Not necessarily for use in an office as some more comprehensive detailing books might be, I would nevertheless say that for those interested in contemporary details, this book is a great resource.

It is what it says it is... a detail book.

By Michael F. Blondino

McLeod takes specific structures in Modern Architecture and provides sections and details about flashing, insulation, connection points. It's interesting if you understand architecture.

High quality of detail references

By James Yuntae Lee

This book contains many useful detail  
and cases built in already in somewhere.

The quality of detail and cad files expresses very precisely each part of detail

Generally I am fully satisfied this book  
in comparison with the price
