By letsstumphannah

This book really helps you know what content that you need to study to prepare for your NM boards (except for the part about film because it's not used anymore).

The only downside is that some of the questions in this book involve all of the above, none of the above, or multiple choice answers such as a or b, etc. I took my boards in 2014 and none of the questions had those options. It was straight forward options of either A, B, C, or D (sometimes E).

By Whitney

This book will be helpful for the boards. It includes everything from radiation safety, patient care and safety, math from patient dosage to decay formulas, NRC and law questions, etc. There are not many guides available for nuclear medicine so there is not much to compare this book but it does contain a lot of information.

Descent review

By Jerrod a Crawford

This book is a good resource for additional raw nucmed topic review, but caution is advisable; the units are sometimes inaccurate, as well as a few skeletal scintigraphy answers
