Amazon.com Review

Amazon Best of the Month, January 2009: "Be Practical, Expect the Impossible." So declares George Friedman, chief intelligence officer and founder of Strategic Forecasting, Inc. (Stratfor), a private intelligence agency whose clients include foreign government agencies and Fortune 500 companies. Gathering information from its global network of operatives and analysts (drawing the nickname "the Shadow CIA"), Stratfor produces thoughtful and genuinely engrossing analysis of international events daily, from possible outcomes of the latest Pakistan/India tensions to the hierarchy of Mexican drug cartels to challenges to Obama's nascent administration. In *The Next 100 Years*, Friedman undertakes the impossible (or improbable) challenge of forecasting world events through the 21st century. Starting with the premises that "conventional political analysis suffers from a profound failure of imagination" and "common sense will be wrong," Friedman maps what he sees as the likeliest developments of the future, some intuitive, some surprising: more (but less catastrophic) wars; Russia's re-emergence as an aggressive hegemonic power; China's diminished influence in international affairs due to traditional social and economic imbalances; and the dawn of an American "Golden Age" in the second half of the century. Friedman is well aware that much of what he predicts will be wrong--unforeseeable events are, of course, unforeseen--but through his interpretation of geopolitics, one gets the sense that Friedman's guess is better than most. --Jon Foro

From Publishers Weekly

With a unique combination of cold-eyed realism and boldly confident fortune-telling, Friedman (*Americas Secret War*) offers a global tour of war and peace in the upcoming century. The author asserts that the United States power is so extraordinarily overwhelming that it will dominate the coming century, brushing aside Islamic terrorist threats now, overcoming a resurgent Russia in the 2010s and 20s and eventually gaining influence over space-based missile systems that Friedman names battle stars. Friedman is the founder of Stratfor, an independent geopolitical forecasting company, and his authoritative-sounding predictions are based on such factors as natural resources and population cycles. While these concrete measures lend his short-term forecasts credence, the later years of Friedmans 100-year cycle will provoke some serious eyebrow raising. The armed border clashes between Mexico and the United States in the 2080s seem relatively plausible, but the space war pitting Japan and Turkey against the United States and allies, prognosticated to begin precisely on Thanksgiving Day 2050, reads as fantastic (and terrifying) science fiction. Whether all of the visions in Friedmans crystal ball actually materialize, they certainly make for

engrossing entertainment. (Feb.)

Friedman, author and founder of a forecasting company, sets out to provide a sense of the twenty-first century. He is confident that rather than being on the verge of decline, the U.S. has actually just begun its ascent and will be the center of power. This is a book about unintended consequences and how the constraints of time and place impact the behavior of individuals and nations and offer a view of future events. With many unknowns and acknowledging potential for error, Friedman carefully explains his position on the ultimate collapse of Russia, our next opponent after the Islamic conflicts, and he evaluates China and concludes it will not become a major threat. He provides thoughtful rationale for Japan, Turkey, and Poland to emerge as great powers, and his theories are fascinating on a confrontation between the U.S. and Mexico, a major economic force at the end of the century. This is an excellent book and will intrigue many library patrons. --Mary Whaley

THE NEXT 100 YEARS: A FORECAST FOR THE 21ST CENTURY BY GEORGE FRIEDMAN PDF

Mexico making a bid for global supremacy? Poland becoming America's closest ally? World War III taking place in space? It might sound fantastic but all these things can happen. In "The Next 100 Years", George Friedman, author of the huge bestseller "America's Secret War" offers a lucid, highly readable forecast of the changes we can expect around the world during the 21st century. He predicts where and why future wars will erupt, and how they will be fought; which nations will gain and lose economic and political power; and how new technologies and cultural trends will alter the way we live in the new century.

WOW.....George Friedman = Modern Nostradamus?

By TG RabidBeaver

After reading this book, I wasn't sure if I wanted to be scared, optimistic, proud to be an American, or if I was simply mystified by the analysis of the author.

George Friedman does a tremendous job of utilizing historical data to analyze and project future global political/military/economic turns over the next 100 years. While there are some things in this book that are already dated (I believe this book was published in 2008/9); there are some projections in this one that are eerily accurate. The best part is, Mr. Friedman is able to do all of this, without taking any real political perspective. This book is not about American politics, it is very much a world view (although some may view it as a being Ameri-centric). Mr. Friedman explains why the United States is still the most critical player on the planet Earth (hint - it has a lot to do with our navy & having warm weather ports on 2 of the world's largest oceans).

Having studied Political Science in college, and having relied on Stratfor.com for writing papers.....I have learned to never underestimate the genius that is George Friedman. I would highly recommend this book to anyone who is interested in geo-politics or enjoys to read political type novels (this book is NOT a novel).

Fun SWAG at the future

By Jack Wilson

I have enjoyed this as a work of speculative fiction. No doubt highly educated speculative fiction. But, as this was published around 2009, and written in 2008, the last 8 years of foreign policy and world events are not factored into his analysis. I concur with him on many points, the rise of Turkey(as a caliphate, not remaining a secular entity), Japan as a re-emerging military power in the north Pacific(they have to), Poland as an emerging power player in Europe(again they have to), the deterioration of China's economy(already happening), war with Russia(watch the news). The things he missed is he dismissed the U.S./Islamist wars.

Completely missed the rise of ISIS, Arab Winter, the effects of the U.S. blunders into Libya(worthless conflict) and Syria(worthless conflict), and the reactions of the Russians to these incursions within their sphere, and the perceived retreat of the U.S. on the world stage. I think the conflict he foretells is definitely coming, just about 20-25 years sooner than he predicts. I would like to see the "Battle Stars" though, that would be validation of a youth spent reading Jerry Pournelle, David Drake, and S.M. Stirling.

absolutely excellent!

By tioligirl - take it or leave it

Loved every line of it even if in some places the thoughts were somewhat repetitive. 40 years ago I left Soviet Union, today I observe Putin's actions with complete understanding of his desire to recreate the Mother Russia. The author was very perceptive in describing Western Europe, Eastern Europe, Russia in terms of their geopolitical desires and tenacity (or lack thereof). I can very well see his projection of technology into the future as well as tech advances due to war and even the affects of such advances on the social fabric of the societies. Western population decline and the changes this will bring to the western world. I was most amazed with the parallels the author draws between US and a teenage behavior as well as Europe and an elder tired man. That alone brings every move US makes in global politics to light! It is really Empowering to know that the U.S. Is still on the rise while behaving just like a indestructible teenager. Understanding the 50 year American cycles was also so very helpful especially to come to terms that the Presidents cannot single handily change was had been set up on the global stage, so no need to panic every time a President you did not vote for gets elected... What a relief! Lol!
